

WebShell Detection and Prevention

What is WebShell

Malicious script uploaded to server through web vulnerabilities, giving attackers remote control capability. Common formats: ASP, ASPX, PHP, JSP, CGI.

Detection

1. File content signature scanning 2. Access behavior analysis 3. Network traffic monitoring 4. System call monitoring 5. Regular security scanning

Prevention

1. Strict file upload validation 2. Disable script execution in upload directories 3. Regular security scanning 4. Deploy WAF 5. Keep software updated
